

BOOSTER[®]

PRODUCE 415V 3 PHASE POWER
FROM 240V (or 480V) SINGLE PHASE

Our 1to3 Phase Converters use the original New Zealand EUROTECH Electronic Controller. These Controllers have been available for over 10 years and thousands are in service around the world.

Manufactured in Wollongong (not China - alleluia!), by the manufacturer of 'Illawarra Transformers' with over 30 years experience. Professionally built, they are a reliable, proven, low maintenance and efficient (94%-96%) machine.

Simply connect to a single phase supply (Supply Authority or Alternator) with the required current capacity and 415V 3 phase is immediately available.

Power is only limited by the current capacity of the single phase supply.

THERE ARE 3 MODELS:- 'E', 'T' & 'F' with power ratings to suit any load.

MODEL 'E'

Digitally controlled low cost Converter for home & light industrial applications.

MODELS 'T' & 'F'

Digitally controlled capacitor switching for smooth operation of all 3 phase motors and loads, including variable speed drives. Power quality is as good as that of the supply authority.

All models are supplied with lifting eyes and levelling feet.

Models up to 8KW are supplied with 4m of cable to connect to the single phase supply and 3 phase indicator lights, circuit breaker, 5 pin output socket and plug to connect the three phase load.

Models 12KW and above have your 3 phase indicator lights and circuit breaker but need to be hard wired to both the single phase supply and the three phase load on site.

Options:-

- Wheels/Casters
- Delete output socket (4KW & 8KW)
- Variations for special applications
- Rain Cover
